

Geography at Chappel Primary school

Intent

Vision Statement

At Chappel Primary school, Geography education is intended to inspire a fascination and curiosity of their planet, and its inhabitants, that will continue long after they leave education. Knowledge of people, places and human and physical features will enable pupils to have an understanding of their world around them and how different concepts and features interconnect and change one another. Through this, children will be inspired to explore, investigate and question their surroundings and compare against other places. Geographical skills will enable our children to observe and answer their own questions and allow them to communicate effectively to others. As a result of their Geography education, children will be familiar with geographical concepts such as changes of time, citizenship and our collective responsibility to share and care for our planet, making our students equipped to be knowledgeable and responsible members of our global community.

Aims

1. Have a knowledge of significant places and their human and physical characteristics.
2. Understand how and why human and physical changes take place.
3. Be able to collect, analyse and present data from fieldwork.
4. Interpret information using a range of geographical sources.
5. Communicate geographically in different ways, including using geographical vocabulary.
6. To foster a sense of responsibility to the planet and each other.
